

Martin(Hsin-Yu) Hsieh

(+1) 323-961-1001 / mdothsieh@gmail.com / www.linkedin.com/in/martin-hsieh/ | github.com/mdothsieh/

Education

University Of Southern California
Bachelor of Science in Computer Science

Los Angeles, CA
Expected graduation: May 2028

EXPERIENCE

Software Engineering Intern

June 2026 – August 2026

FLEX Ltd. (Suzhou, Su Hong site)

Suzhou, China

- Developed Python scripts to interface with NI cDAQ-9185 hardware (NI-9201/9401 modules) to retrieve and store voltage and digital I/O measurement data from hardware validation tests for an undisclosed client
- Automated test data collection and output into structured tabular and graphical formats, replacing manual data recording in an assembly line lab testing environment
- Utilized NI LabVIEW and NI MAX alongside Python to build data acquisition workflows for hardware system validation testing

Software Engineering Intern

May 2025 – September 2025

Kenmou Enterprise (Designer & Manufacturer of Luxury Packaging)

Taipei, Taiwan

- Developed full-stack systems utilizing React.js + Node.js to automate order processing and production tracking; boosted workflow throughput up to 40% and cut manual coordination by 35%
- Wrote Python scripts to parse and extract data from ArtiosCAD design files and trigger automated approval notifications via internal APIs, cutting design-to-approval cycle time by 30%
- Built automated quality control scripts and digital inspection checklists, decreasing human error 25% and reducing material waste during sampling and pre-production
- Implemented Docker-based CI/CD pipelines, improving deployment reliability and shortening release cycles 40%
- Developed a React.js internal dashboard to centralize production records previously tracked in paper logs, enabling real-time status updates and reduction documentation retrieval time by ~40%

Software Engineering Intern

July 2023 – September 2023

Far Eastern Apparel (Suzhou) Co., LTD., China

Suzhou, China

- Automated enterprise workflows via CI/CD pipelines, slashing deployment cycles 40% and manual tasks 60%; Built an internal proposal generation tool using Node.js and templating logic to auto-populate client documents from a MySQL database, reducing proposal turnaround time by 25%
- Built an Android application serving 300+ users for real-time employee tracking, integrated with a Node.js REST API backend and MySQL database; reduced reporting errors by 35% through automated data validation
- Developed a Python ETL pipeline to process and clean production data, replacing manual spreadsheet workflows and reducing data entry errors by 15% across a 20-person team

PROJECTS

Basketball Statistics Management System / Java, SQL, GUI

April 2023 – December 2023

- Engineered a Java/JavaFX application to digitize player performance tracking for Coach K's team, reducing manual stat collation time by 75% and eliminating data loss through automated MySQL database integration
- Designed role-based login (coach/player), real-time stat entry/editing, and AI-driven ranking algorithms, achieving a 90% user satisfaction score (9/10 avg. across 9 criteria) and enabling data-driven team strategy adjustments
- Implemented a custom linked list and binary search algorithm in Java to manage and query 100+ player profiles with $O(\log n)$ lookup time, reducing search latency to under 1 second
- Integrated calendar scheduling, fuzzy search, and automated SQL report generation, streamlining post-game analysis workflows and reducing Coach K's administrative tasks by 60%

Technical Skills

Language: Java, Python, JavaScript, TypeScript, SQL

Frameworks: React.js, Node.js

Tools: Docker, Git, GitHub Actions, UiPath, Linus

Databases: MySQL, PostgreSQL

Concepts: REST APIs, CI/CD, OOP, Data Structures & Algorithms
